

## LABORATORY SERVICES

Our modern purpose built laboratory provides a temperature controlled, well equipped, modern facility which is able to offer a range of geotechnical tests, from water content and PSD's, consolidation and effective stress testing and rock testing.

At Geotechnical Engineering Ltd we strive to deliver the highest level of service possible to deliver quality data. We recognise that our Clients require the timely delivery of accurate results and have recently introduced the KeyLAB laboratory data management system to support this.

We firmly believe that communication is the key to providing a great service, which is why every schedule is overseen by one of our dedicated Client Managers, from start to completion.

From receipt of each schedule, right through to the delivery of the final data, our team of highly trained and experienced technicians, (many NVQ qualified), ensure that the geotechnical testing is carried out in accordance with BS EN 17892, BS1377 and ISRM standards. Test results can be issued as PDF, Excel and AGS3.1 and AGS4.

All testing is performed within the scope of our quality system, which is certified to ISO 17025. Testing accreditation is awarded by UKAS and the full range of tests accredited by UKAS can be found at [www.ukas.org](http://www.ukas.org)

We also offer a collection service throughout the UK for your convenience. Please contact us for further information.

**Classification Testing**  
**Compaction/CBR Earthwork testing**  
**Consolidation and Permeability**  
**Shearbox and Ringshear**  
**Effective Stress**  
**Rock Testing**

Ref No.2718
